CLUDO

Coding assignment

Main objective

Create a twitter client that enables the user to:

- Navigate the options through a UI.
- List tweets matching a hashtag that the user chooses
- Option to filter loaded tweets by free text search
- Save selected tweets to disk in a format of your own choice (no loading is required)

Twitter API

You can either use the official twitter rest API at https://dev.twitter.com/rest/public or use a library that wraps it – it's all up to you.

Language of choice

Choose whatever language you are most comfortable in.

3rd party libraries:

You can choose to use any 3rd party library that you think fits the solution.

Other info

- You can spend as long as you want on the assignment.
- It's not required that you show any content other than text.
- Feel free to user any patterns and ways of structuring the code, that you find suitable for the project.
- Have as much fun doing the exercise as possible, whatever that implies in your choice of tools, libraries, etc.
